

# Welcome to Help Guide

First of all, Thanks for the purchase!

Step 01: Open the PSD file. You have to find some layers/folders. If you don't see the layer panel, press F7 or go to Window>>Layers.

Step 02: Open your photo in Photoshop. Press Ctrl+A to select whole photo & then select Ctrl+C to Copy it.

Step 03: Find out the Group Layer (or Group Folder) **"Place Your Image Here"**. Expand it by clicking the small Triangle icon. Now you will see the layers inside the folder. There is a layer called **"Double Click & Paste"**.

Step 04: Do what the layer says, that means Double Click on the Smart Object's Thumbnail. A new document window will open, Just paste the photo you copied few seconds ago by pressing Ctrl+V.

Step 05: Your Editing is nearly perfect. Your Photo may need to scale up or down to fit the canvas. To do that, please go to Edit>>Free Transform (or press Ctrl/Cmd+T). Hold down Shift + Alt/Option and select one of the corner point. And then drag in or out to scale up or down. Thats it, Enter or Return to accept that scaling. Delete the other if you wish (Not Necessary). Close this document, if something pops up, click "Yes".

Step 06: Everything is done. But you can get **MORE** look or feel by adjusting/positioning other layers. Experiment with Layer's Opacity, Turn On/Off few layers to reveal more look.
